Type sheet Bi-directional in-line deflagration flame arrester, endurance burning proof KITO<sup>®</sup> INE-DB-I-.../... KITO<sup>®</sup> INE-DB-I-.../...-T (-TT)

### Application

For installation into pipes to the protection of vessels and components against deflagration of flammable liquids and gases. Approved for all substances of explosion group IIA1 (old: I) with a maximum experimental safe gap (MESG)  $\geq$  1.14 mm. Bi-directionally working in pipes, whereby an operating pressure of 1.1 bar abs. and an operating temperature of 60 °C must not be exceeded. All sizes are tested against "stabilized burning" and withstand this for indefinite time (endurance burn). The distance between a potential ignition source and the flame arrester must not exceed 50 times the inner pipe diameter. An installation into horizontal and vertical pipes is permissible. To detect a thermal load on the KITO<sup>®</sup> flame arrester element in operation, a temperature sensor can be implemented as an option into the flame arrester body.

### Performance curves

Flow capacity V based on air of a density  $\rho$  = 1.29 kg/m<sup>3</sup> at T = 273 K and atmospheric pressure p = 1.013 mbar. For other gases the flow can be approximately calculated by

$$\dot{\mathbf{V}} = \dot{\mathbf{V}}_{b} \cdot \sqrt{\frac{\rho_{b}}{1.29}} \quad or \qquad \dot{\mathbf{V}}_{b} = \dot{\mathbf{V}} \cdot \sqrt{\frac{1.29}{\rho_{b}}}$$
